EDUCATION

University of Wisconsin–Madison

Bachelor of Science in Computer Science, Data Science

Term GPA: 3.306 **Cumulative GPA:** 3.088

Coursework: Intro to Discrete Math, Linear Algebra, Programming III, Intro to AI, Data Science Modeling I

Aug 2025 – Dec 2027

Madison, Wisconsin

University of Minnesota–Twin Cities

Computer Science, Data Science | GPA: 3.57

Aug 2024 – May 2025

Minneapolis, Minnesota

EXPERIENCE

Website & Outreach Automation Developer

Wisconsin Robotics

Sep 2026 – Present

Madison, WI

- Designed and deployed a responsive club website using React and Supabase, enabling team leads to update content without engineering support.
- Automated email outreach workflows for prospective members and sponsor companies.

Software Engineering Intern – AgentForge

Ooredoo Qatar

Jun 2026 – Jul 2026

Doha, Qatar

- Built an internal LLM-agent orchestration system that decomposes feature requests into a directed sequence of configurable execution steps culminating in tested, review-ready code proposals; validated end-to-end across 2 workflows and 60+ steps.
- Indexed 500+ files, symbols, dependencies, and tests via a static-analysis pipeline to rank and retrieve relevant code context per request, reducing irrelevant context sent to AI models by up to 60%.
- Implemented a per-step model router across Copilot CLI, locally hosted models, and deterministic tools, reducing AI execution costs by 35%+ while allowing models, tools, prompts, and execution settings to be configured independently per step.
- Added automated testing, security scanning, requirement validation, quality gates, and bounded fix-and-retry loops, with structured logging of prompts, outputs, model usage, costs, retries, failures, and execution state for debugging and recovery from individual failed steps.

Founding Engineer – App Developer

Bhasha – AI-Powered Language Learning Platform | www.learnwithbhasha.com

May 2025 – Sep 2025

Minneapolis, MN

- Built and launched a full-stack AI-powered ed-tech platform in a 2-month development cycle, delivering gamified lessons and real-time analytics to 200+ active users.
- Engineered a cross-platform Flutter mobile application featuring dynamic module systems, XP progression tracking, offline-first Isar caching, and custom quiz engines integrated with a centralized Supabase database.
- Designed reusable UI component systems and animation frameworks to improve maintainability, consistency, and user engagement across web and mobile clients.

PROJECTS

Snap | TypeScript, Git, Node.js, Systems Programming

- Built Snap, a local-first developer tool that records immutable Git-backed execution history across user and AI-agent code changes, making every run traceable to the exact repository state that produced it.
- Designed deterministic snapshot deduplication and episode tracking to distinguish user edits, agent-generated changes, unchanged runs, and successful stable states.
- Built a local dashboard with a custom unified-diff renderer for reviewing pre/post execution snapshots, with zero external runtime dependencies or telemetry.

PrivacyGuard Browser Extension | JavaScript, Chrome APIs, DOM Manipulation

- Developed a browser extension that inspects request/response headers and cookie domains in real time to classify and visualize first- and third-party tracking behavior across visited websites.
- Implemented automated cookie blocking using Chrome webRequest APIs to intercept and suppress tracking requests before execution.
- Designed persistent storage and analytics logging to track domain-level behavior patterns across browsing sessions.

Self-Hosted Infrastructure & Telemetry Platform | Linux, Docker, HMAC, Networking

- Built and operating a Linux homelab with an HMAC-authenticated telemetry pipeline for CPU, GPU, network, and uptime metrics, exposed through a real-time browser dashboard.

TECHNICAL SKILLS

Core: Python, TypeScript/JavaScript, C#, Dart, SQL

Also Used: Java, C/C++, HTML/CSS

Frameworks: React, Next.js, .NET, Flutter, Node.js

Systems/Cloud: Linux, Docker, Azure, Git, REST APIs, HMAC Authentication, Supabase, MongoDB

Certification: Oracle Cloud Infrastructure Migration Architect Professional – 2025
